Instructions for mounting small PTZ Cameras
## *Using Part # MNT-PTZ-SM-001*

Kit includes:

(1) MNT-PTZ-SM-001universal mount bracket (stainless)

(4) 1" X 1/4" track bolts for camera attachment

(4) 1/4" lock washer nuts

(1) 5/16" flat washer (for setting track bolts)

Instructions include the installation of the track bolts in the MNT-PTZ-SM-001 mount bracket for the mounting of the camera and examples of the various mountings methods.

Step #1 Installing track bolts for camera mounting:
- Choose the camera mount bolt pattern before installing track bolts.
- If a bolt pattern is not available drill 17/64" holes for other patterns.
- Install the track bolt from the inside of the mount and use a 5/16 flat washer (between the nut and mount base) to help draw the bolt into the 17/64" hole
- Use a wrench to tighten the nut thus pulling the track bolt into firm position.
Step #2 **The MNT-PTZ-SM-001 mount bracket** *can be used for the following applications:*

*Flat Mounting
*Corner Mounting
*Pole Mounting

* Flat mounting example: Installing # 14 or 1/4" self taping hex head screws after track bolts installed (Plywood is only used for demonstration
purposes, not needed for installation. use six screws for a solid mounting into wall.)

4

* Corner mounting example: **Bending of mounting flanges in a vise to the appropriate angle is required** *(#14 or 1/4 " Dia. attachment screws required)*

* Pole mounting example:
Flanges bent to appropriate angle for pole Diameter
(use a Stainless large size hose clamps or self taping screws # 14 or 1/4")

Step # 3 After the MNT-PTZ-SM-001 mount bracket is fixed to the wall
or pole, the camera can be attached to it using 1/4" nuts (supplied)
The wiring can led through the hole or outside as necessary.

Example: (flat mount shown)
